NEWS RELEASE

KEX2008-07

**Flagstaff, WA Property –Drill Results**

Kent Exploration Inc, (the “Company”), reports on assay results that have been received on two of six holes from its fall 2007 diamond drill program on its 100% optioned Flagstaff, WA property, which lies approximately 4 miles west of Northport, WA and 15 miles south of Rossland, BC.

The first two holes, FLAG07-01 and FLAG07-03, were drilled into the bottom section of the approximately 1,750 foot long strike of the historic barite deposit. The objective of the drill program was to confirm the barite grades reported by CE Minerals during its 1981 – 1982 drill program to define the barite deposit, and to follow up the reported gold/silver mineralization.

DDH FLAG07-01 was drilled between CE Minerals drill hole CE53 and CE54 and intersected 84 feet of barite from 41 feet to the bottom of the hole at 125 feet grading an average of 51.15% barite.

Drill Hole	Azimuth (true)	Dip	Depth/Ft	From	To	Interval	Ba %
FLAG07-01	165°	-50°	125				
Assays Pending from 0ft – 41ft				0	5	5

				116	120	4	62.63
				120	125	5	63.43
				125	130	5	63.65
				130	135	5	61.8
Assays Pending				135	231		
Bottom of Hole – 231ft							

The barite grades intersected in these two holes generally conform to the grades previously intersected by CE Minerals.

Assays are pending for the remaining four holes and the balance of the two drill cores, which consist mainly of carbonaceous black shale and/or argillite, with quartz carbonate and calcite intrusions and locally heavy concentrations of pyrite.
